

GW 250 M1 CULTIPACKER

www.apv-america.com

Our GW Series cultipackers offer two roller options: the Cambridge roller and the toothed-ring roller.

Ideal to smooth and firm a seed bed, the GW 250 M1 is a compact solution that works well alone or with our PS 300 seeders for seeding food plots or PS 300 D for evenly spreading granular fertilizer, as well as our MDP seeder/spreaders. Both roller types also work well in grass for reseeding/overseeding, ensuring excellent seed to soil contact. (Shown with optional MDP seeder, seeder mount, access platform, and lights.)

Cambridge rollers come in 15.4" and 20.9". Rollers are free-spinning to follow contours without ripping the surface.

The tooth-ringed roller design creates a self-cleaning roller. It works well in both existing grasses and newly tilled soil.

APV cultipackers with optional seeders come with a convenient step and platform, making for easy hopper filling.

ITEMS INCLUDED

- Cultipackers complete with one of three roller choices
- Support stand for when the roller is parked
- Integrated tool storage

TECHNICAL DATA

- **Working width** 8.0 ft
- ⚖️ **Weight*** 15.4" Cambridge roller . . . 1,053.8 lbs
20.9" Cambridge roller . . . 1,411.0 lbs
16.1" Toothed-ring roller . . . 1,666.7 lbs
- 🔧 **Mounting category** Cat. 2
- 🏗️ **Tractor performance:** sufficient hydraulic lift for roller

* Add 331 lbs for PS 300 seeder assembly and mount; additional weight for seed/product.

FEATURES

- Excellent to smooth and firm seed beds
- Combine with PS Series or MDP seeders to complete two tasks at once
- Weight ensures excellent seed-to-soil contact while minimizing seeds required when combined with pneumatic seeder
- Optimal soil preparation with free-spinning wheels/rings
- Cambridge roller is excellent in standing low-cut grass
- Toothed-ring roller works great in colder climates for pressing moisture to the surface for improved germination

GW 300 M1 CULTIPACKER

The GW 300 offers the same great features as our GW 250, with an additional 1.8 feet of working width at 9.8 ft. If used with a PS Series seeder or MDP seeder, our step and platform are included in the base configurations for both GW sizes. These provide easy access for filling the seeder hopper and basic maintenance.
